VALUE PROPOSITION

As a	Persona
I want	to validate my information
Then	I select a validator to validate my information

ACCEPTANCE CRITERIA

- System encrypts a document and downloads the encrypted file
- The user can send a link to the validator
- The user needs to select the document to be validated
- The system displays the validators for the selected document
- User needs to select the validator
- One validator
- When sending the information to the validator, the information is encrypted with the public key of the validator
- Only the selected validator can open the information to validate
- The information receives the status of 'pending Validation'
- When submitting to validate a blockchain transaction is completed
- One validator per transaction

SCENARIOS

@request-validate

Feature: send to validate

In order to have document informations on PoP Docs

As an Persona user, I want to send my information to validate.

Background: send information page

Given I click 'request validation' menu item

And I visit page 'validate'

Scenario: select validator without document type selected

When I select a <validator>

And document type is <document-empty>

Then I see a warnning <message>

And I can not proceed

Scenario: select validator with document type selected

When I select a <validator>

And document type is <document-selected>

Then I see button validator turn to <red>

And I can proceed

@encrypt-document

Background: selected a document type and validator

Given document type is <document-selected>

And I select a <validator>

Scenario: encrypt document without select one

When I click "Encrypt for validator" button

And I do not select a file

And I click "Encrypt" button

Then I see a warnning <message>

And I can not proceed

Scenario: select document to encrypt

When I click "Encrypt for validator" button

And I click "Choose" to select a file

And I click "Encrypt" button

Then I can click "Download" button

And encrypt document is downloaded

@filter-validator

Scenario: selected a document type

Given I visit page 'validate'

When I select a document type <document-selected>

Then <list-validators> is filtered by <document-selected>
